

INTERNATIONAL LEGAL REGULATION OF TRANSIT OF ENERGY CARRIERS: THEORY AND PRACTICE

In modern international relations a lot of new problems arise. Despite this, international cooperation in the field of energy security issues is still at stake, on the other hand, there is a growing attention to international legal regulation of such cooperation. In addition, the foundations of economic and social development depend on energy resources, and the location of these resources on the globe is quite uneven that's why the interstate cooperation is becoming increasingly important in this regard. Today the international community is actively working in this direction of cooperation. So, in December 25, 2015 the UN General Assembly adopted a resolution on the transit transport corridors. The enhancement of action on coordination and further development of partnership and cooperation relations in the field of transport on the example of sustainable transport and environmental safety are mentioned in the document as well as an initiative to hold the first world conference on sustainable transport in 2016 is proclaimed.

Keywords: energy resources, international law, norms on the transit, doctrine of international law, distinctive areas, international security.
